Chapter 1: What Is Forex?

Chapter 2: Why Trade Forex?

Chapter 3: How the Forex Market Works

Chapter 4: The Major Currency Pairs

Chapter 5: Choosing a Broker & Setting Up

Chapter 6: How to Read a Forex Chart

Chapter 7: Technical vs. Fundamental Analysis

Chapter 8: Basic Forex Strategies

Chapter 9: Mindset of a Forex Survivor

Let's get started with the first chapter:

Chapter 1: What Is Forex?

 Page 1

The foreign exchange market — known as Forex or FX — is the largest financial market in the world. Every day, over \$6 trillion is exchanged globally by banks, businesses, governments, and individual traders like you and me.

Forex is where one currency is exchanged for another, like USD to GBP, or EUR to JPY. It's the engine that powers global trade and travel — and for smart traders, it's a real opportunity to build income, skill, and freedom.

- 💡 Forex = Foreign Exchange. It's not a game. It's a skill that can change your life if you treat it seriously.

🔄 Why do currencies get exchanged?

People exchange currencies every day without realizing it:

A tourist from the U.S. traveling to London needs GBP

A South African online shopper pays in USD or EUR

Businesses import goods from overseas and must pay in other currencies

These global actions cause currency prices to rise and fall — and that movement is what traders profit from.

Why Do People Trade Forex?

Because it's:

 Always moving (high opportunity)

 Open 24 hours a day, 5 days a week

 Possible to start with a small account

 Accessible from your phone or PC

Whether you're scalping, swing trading, or learning price action — the Forex market is your battleground.

□  The goal? Survive the market first. Then master it.

Chapter 2: Why Trade Forex?

There are hundreds of ways to make money online — but few are as global, accessible, and rewarding as Forex trading. Unlike crypto or stocks, Forex gives you the chance to trade the world's biggest currencies — anytime, anywhere.

- 💡 You're not just trading charts — you're trading the heartbeat of the global economy.

💡 1. Freedom of Time

Forex is open 24 hours a day, 5 days a week. That means:

You can trade before or after work

There's no need to wait for a bell like in stock trading

It fits around your life — not the other way around

Whether you're a night owl or early riser, there's always a session running.

🌍 2. Global Opportunity

You're not limited to one economy. In Forex, you can:

Trade the U.S. Dollar (USD), Euro (EUR), British Pound (GBP), and more

Profit from international news, crises, and growth

Learn how the world connects through money

3. Leverage & Low Startup Capital

Unlike other businesses, you can start trading with as little as \$10 to \$100. Brokers offer leverage (like 1:500) which allows you to open bigger trades with smaller balances.

□ ⚠ But remember: leverage is a tool, not a shortcut. Use it wisely.

4. Unlimited Potential — But It's Not Easy

Forex gives everyone the same chance:

No boss, no gatekeepers

You don't need a degree or background

Just skill, strategy, and discipline

That's what makes it dangerous for gamblers — and powerful for the focused.

□ 🧠 The market doesn't care who you are. It rewards only the disciplined.

Chapter 3: How the Forex Market Works

📖 Pages 3–4

Before you place your first trade, you need to understand the engine of the Forex market — how it moves, who moves it, and how you fit into the picture.

Forex trading is the exchange of one currency for another. You trade in currency pairs, like:

GBP/USD – British Pound vs U.S. Dollar

EUR/USD – Euro vs U.S. Dollar

USD/JPY – U.S. Dollar vs Japanese Yen

When you trade a pair, you're buying one currency and selling the other.

- 💡 Example: If you buy GBP/USD, you're betting the British Pound will rise against the U.S. Dollar.

🕒 The 4 Major Trading Sessions:

The market is open 24/5 because it moves through global financial hubs:

Session	Location	Hours (GMT)
Sydney	Australia	10 PM – 7 AM

Tokyo Asia 12 AM – 9 AM

London Europe 8 AM – 5 PM

New York USA 1 PM – 10 PM

- 🔥 The most volatile times are when London + New York overlap — that's when big moves happen.

Page 4 — Who's in the Market?

Forex isn't just retail traders like us. Big players move the market, including:

 Central banks (e.g. U.S. Federal Reserve, Bank of England)

 Hedge funds and financial institutions

 Corporations doing international business

 Retail traders using brokers and trading apps

The Role of the Broker

You trade Forex through a broker, which connects you to the market using platforms like:

MetaTrader 4 (MT4)

MetaTrader 5 (MT5)

cTrader, etc.

The broker gives you access to price feeds, lets you open trades, and provides leverage.

- ❑  Pro Tip: Always choose a regulated, low-spread broker with good reviews and fast withdrawals.

Key Terms to Know:

Pip = smallest price move (e.g., 0.0001 for most pairs)

Lot = position size (e.g., 0.01 = micro lot)

Spread = difference between buy & sell price (your cost)

Leverage = borrowing power (e.g., 1:500)

Chapter 4: The Major Currency Pairs

 Page 5

In the Forex market, not all currency pairs are created equal. Some are highly traded with tight spreads and predictable behavior — these are called the majors.

Learning these pairs helps you master the market faster and stay away from high-risk, low-liquidity traps.

What Are Major Pairs?

Major pairs include the U.S. Dollar (USD) and another strong global currency. These pairs are:

Highly liquid

Have low spreads

Often follow cleaner trends

The Most Traded Major Pairs:

Pair	Nickname	What It Means
------	----------	---------------

EUR/USD	Euro-Dollar	Most traded pair in the world
---------	-------------	-------------------------------

GBP/USD	Cable	British Pound vs U.S. Dollar
---------	-------	------------------------------

USD/JPY	Dollar-Yen	Safe haven during crisis
---------	------------	--------------------------

USD/CHF	Swissy	USD vs Swiss Franc
---------	--------	--------------------

USD/CAD	Loonie	Tied to oil prices
---------	--------	--------------------

AUD/USD	Aussie	Australia vs U.S. Dollar
---------	--------	--------------------------

NZD/USD	Kiwi	New Zealand Dollar vs USD
---------	------	---------------------------

Which One Should You Start With?

As a beginner, it's smart to focus on just 1–2 pairs to start:

Start with EUR/USD for lower volatility

Move to GBP/USD for cleaner price action

Try USD/JPY for a different pace and rhythm

- 🎯 Master one pair before chasing all of them.

📈 Avoid exotic pairs (like USD/TRY, ZAR/JPY) at the beginning — they have big spreads and crazy price moves.

Chapter 5: Choosing a Broker & Setting Up Your First Account

📖 Pages 6–7

To trade Forex, you need a reliable broker — the bridge between you and the market. The broker gives you access to price charts, lets you place trades, and provides leverage.

But not all brokers are safe. Let's break it down.

Page 6 – What to Look for in a Broker

When choosing a broker, make sure they are:

Regulated

Choose a broker that's licensed by trusted regulators like:

FSCA (South Africa)

FCA (UK)

ASIC (Australia)

CySEC (Cyprus)

Low Spreads & Fast Execution

Tight spreads save you money. Fast order execution means you don't miss your entry price.

Good Customer Support

You want a broker that replies fast when things go wrong.

✅ Multiple Payment Options

You should be able to deposit/withdraw via Skrill, Neteller, cards, crypto, or local methods.

✅ Demo + Live Accounts

Start with demo to practice, then switch to live when you're confident.

⚙️ Recommended Beginner Brokers:

Deriv.com – Popular for synthetic indices & easy setup

Exness – Fast withdrawals, low spreads

HFM (HotForex) – FSCA regulated

IC Markets – Best for raw spreads & pro trading

- ❌ 🚩 Stay away from shady brokers offering “guaranteed profits” — that’s a red flag.

Page 7 – How to Set Up Your First Account

1. Choose a Broker Visit their site (e.g., deriv.com), click “Sign Up,” and use your real info.
 2. Verify Your Identity Upload ID + proof of address (bank statement or utility bill).
 3. Create a Demo Account Start with \$10,000 fake money and practice your strategy.
 4. Download a Trading Platform Use MT5 for most brokers. You can use it on your phone or PC.
 5. Fund a Live Account (When Ready) Start small. Even \$20–\$50 is enough to learn risk management.
-

- 💡 Focus on learning, not earning. Demo like it's real money. Real success starts with the right foundation.

Chapter 6: How to Read a Forex Chart

📖 Pages 8–9

Forex charts are your battlefield — and your greatest weapon. If you don't know how to read them, you're trading blind.

Let's break down the basics of chart reading so you can trade with clarity and confidence.

📊 Page 8 – **Understanding the Chart Structure**

Most Forex charts are candlestick charts. Each candle tells a story of price movement within a specific time period (1 minute, 1 hour, 1 day, etc.).

🔥 What Does a Candle Show?

A single candlestick shows four key prices:

Open – where the price started

Close – where the price ended

High – the highest point during the candle

Low – the lowest point during the candle

Bullish Candle (Green) Bearish Candle (Red)

Open < Close Open > Close

Price moved UP Price moved DOWN

□ 🧠 Candles form patterns — and patterns form opportunities.

 Timeframes:

Each chart has timeframes like:

M1, M5, M15 (Scalping)

H1, H4 (Day/Swing Trading)

D1, W1 (Long-Term Trading)

Use higher timeframes to see the trend. Use lower timeframes to time your entries.

Page 9 – **Support, Resistance & Market Structure**

- ◆ **Support**

A price level where the market bounces up after falling. It shows buyers are active.

- ◆ **Resistance**

A level where price reverses down after rising. Sellers are strong here.

Market Structure: The Trend Game

▲ Uptrend = Higher Highs (HH) and Higher Lows (HL)

▼ Downtrend = Lower Highs (LH) and Lower Lows (LL)

↻ Sideways = Ranging market (no clear direction)

□ 📌 Tip: Never trade against the trend unless you have experience.

📌 Tools to Help You:

Trendlines – help visualize direction

Horizontal lines – mark key levels

Indicators – (moving averages, RSI) support your analysis

Chapter 7: Technical vs. Fundamental Analysis

 Pages 10–11

There are two main schools of thought in Forex: technical analysis and fundamental analysis. Understanding both helps you decide when to enter, when to exit, and what moves the market.

 Page 10 – **What Is Technical Analysis?**

Technical analysis is the study of price action on a chart. It uses:

Candlestick patterns

Support & resistance

Trendlines and indicators

This type of analysis is visual and reactive — you're reading what the market is doing right now.

 Common Technical Tools:

Moving Averages (MA) – smooth out price trends

RSI (Relative Strength Index) – tells if a market is overbought/oversold

MACD – shows momentum shifts

Fibonacci – helps you find retracement zones

- 🧠 “Price moves in patterns — your job is to recognize them before they explode.”

Page 11 – **What Is Fundamental Analysis?**

Fundamentals look at the economic and political factors that move currencies.

Examples:

 U.S. Inflation Report

 Central bank interest rate decisions (like the Fed or ECB)

 Oil price changes (affecting CAD, AUD)

 Unemployment or GDP numbers

These news events can cause volatility, especially in major pairs.

 Which Should You Use?

 Technical Analysis helps you:

Time entries and exits

Read trends and key levels

 Fundamental Analysis helps you:

Understand why the market is moving

Avoid trading during dangerous news events

-  The best traders learn to use both — fundamentals show direction, technicals show precision.

 Pro Tip: Always check a Forex calendar (like [Forexfactory.com](https://www.forexfactory.com)) before trading. News events can spike prices unexpectedly!

Chapter 8: Basic Forex Strategies

 Pages 12–14

Once you understand the charts and trends, it's time to build your trading edge — your strategy. A strategy is a rule-based system for when to enter, hold, and exit a trade.

The goal isn't to win every time — it's to stay consistent, calculated, and disciplined.

✂ Page 12 – Price Action Strategy (No Indicators)

Price Action is the cleanest form of trading. You watch how the candles form, bounce, and break around key levels.

- ◆ Example Setup:

Mark key support/resistance on H1 or H4

Wait for a rejection candle (like a pin bar)

Confirm with structure (higher high / higher low)

Enter with tight stop loss below the rejection

□ 💡 Price action teaches you to trust the chart, not chase signals.

🌟 Breakout Strategy

Sometimes the market moves sideways — this is a range. After a while, price “breaks out” strongly in one direction.

- ◆ Setup:

Draw support/resistance box

Wait for price to break and close outside the box

Retest the zone and enter on confirmation

Use stop loss inside the range

📌 Works well during London or New York session

🎯 Page 13 – Moving Average Crossover Strategy

This is a great strategy for beginners using indicators.

Setup:

Use EMA 9 (fast) and EMA 21 (slow)

When EMA 9 crosses above EMA 21 ➤ Buy

When EMA 9 crosses below EMA 21 ➤ Sell

Use higher timeframes for better signals (H1, H4)

- ☐ ☒ Combine with support/resistance zones to increase accuracy.

Page 14 – Scalping Strategy (Fast Trades)

Scalping means entering and exiting within minutes. This works best on M1 or M5 charts.

Setup:

Use Bollinger Bands

Trade when price hits outer band and shows reversal candle

Target small pips (5–10), low risk

⚠ Needs focus, speed, and tight spreads. Not for emotional traders!

 Golden Rule:

- A strategy without risk management and discipline is just gambling.

Chapter 9: Mindset of a Forex Survivor

> “If you can’t manage a \$10 account, you’ll never survive with \$10,000. It’s not about the size of your capital — it’s about the size of your discipline.”

 Pageaccount

Most traders fail not because of bad strategies — but because of a broken mindset. Greed, fear, impatience, and ego destroy more accounts than the market ever will.

-  Trading isn’t just skill. It’s emotional mastery.

💡 Page 17 – What Breaks Most Traders

❌ 1. Chasing the Market

Jumping in with no plan, afraid of “missing out.” You lose more by being reactive than by missing trades.

❌ 2. Revenge Trading

After a loss, you double your lot size and try to “get it back.” That’s how you blow an account.

❌ 3. Overtrading

Taking 10+ trades a day with no clarity. Quality beats quantity every time.

🔒 The Survivor’s Mindset

✅ Discipline Over Emotion

Trade your plan — not your feelings. You’re a sniper, not a gambler.

✅ Focus on Process, Not Profits

The goal isn’t to make money fast. It’s to master your skill, improve daily, and stay consistent.

✅ Patience Pays

Sometimes the best trade is no trade. Wait for clean setups. Let the market come to you.

🔥 Page 18 – Rules of a True Forex Survivor

1. Risk small. Think big.
2. Accept losses — they're part of the game.
3. Never let one trade destroy your week.
4. Don't copy — develop your own style.
5. Keep a trading journal. Track everything.
6. Trade less. Learn more.

□ “Mindset isn’t a soft skill. It’s your survival strategy.”

Success in Forex comes down to your mindset more than any indicator.

Message from the Author:

To every trader reading this – you are not alone in the journey. I wrote this book because I know

What it feels like to start with confusion, to lose, and to question yourself in front of the charts. But I

Also know what it feels like to keep going.

Trading is not just about strategy; it’s about mindset, survival, and growth. Don’t chase fast wins.

Build your skills, study your charts, and always protect your energy.

You have what it takes. You are a survivor.

Stay focused,

Liema Jonas
